## FUND IMPACT MEASURES

	Fund	Benchmark	Based on company reported	% data estimated fund/benchmark	
Carbon efficiency	126.50	161.26	tons of GHG (Scope 1 & 2) emissions per \$1M revenue	32%	33%
Waste efficiency	355.74	295.27	tons of waste generated per \$1M revenue	50%	51%
Water efficiency	7.93	8.55	thousand cubic metres fresh water used per \$1M revenue	53%	54%
Gender equality	28.5%	28.4%	percentage of women in boards and top management	0%	0%
Executive pay	105.9	111.2	ratio of executive level pay to median employee pay	3%	3%
Board independence	80.1%	80.0%	independent board members	1%	1%
Environmental good	12.4%	11.4%	portfolio allocated to environmental solutions	n/a	n/a
Social good	14.3%	14.2%	portfolio allocated to help alleviate social issues	n/a	n/a
Avoiding environmental harm	7.0%	7.0%	portfolio allocated to environmentally destructive industries	n/a	n/a
Avoiding social harm	3.7%	4.9%	portfolio allocated to industries aggravating social issues	n/a	n/a
Economic development	\$ 46,800	\$ 46,900	median income of portfolio weighted geography of economic activity	n/a	n/a
Avoiding water scarcity	2.51	2.51	geographic water use (World Resource Institute scale 0-5 from most to least water scarce areas)	n/a	n/a
Employment	4.9%	4.9%	unemployment in portfolio weighted area of economic activity	n/a	n/a
Tax gap	3.60%	3.69%	estimated % tax avoided by corporate tax mitigation schemes	n/a	n/a

## INVESTMENT EQUIVALENTS

In real terms compared to the Developed Markets, 1 million USD invested in Global Index finances:

		Real world equivalent	SDG relevance
Carbon efficiency	11.11	fewer tons of GHG emissions	7
Waste efficiency	-8.75	more tons of waste generated	6, 12, 14, 15
Water efficiency	0.3	fewer thousand cubic metres fresh water used	6
Gender equality	0.1%	more women in top management	5
Executive pay	5.4	fewer multiples of median employee pay paid to top executives	10
Board independence	0.0%	more board independence	10, 16
Environmental good	0.9%	more invested in industries contributing to solving environmental issues	most SDGs
Social good	0.1%	more invested in industries helping alleviate social issues	most SDGs
Avoiding environmental harm	0.1%	less invested in industries aggravating environmental issues	most SDGs
Avoiding social harm	1.2%	less invested in industries aggravating social issues	most SDGs
Economic development	\$100	more economic activity in less developed economies	16, 17
Avoiding water scarcity	0.00	less water use in water scarce localities (World Resource Institute)	16, 17
Employment	0.0%	more economic activity in high unemployment geographies	1, 8, 11, 12, 16
Tax gap	0.09%	more tax paid	1, 9, 10, 16

## TOP AND BOTTOM PERFORMERS

	Fund top performing holding
	Fund bottom performing holding
IMPACT INDICATOR LEVEL	
Carbon efficiency	Kinnevik AB Class B
	Alumina Limited
Waste efficiency	Fidelity National Financial Inc. - FNF Group
	Kinross Gold Corporation
Water efficiency	PrairieSky Royalty Ltd
	Exelon Corporation
Gender equality	Nomura Real Estate Master Fund
	19 companies with all male board and management
Executive pay	Daimler Truck Holding AG
	United Parcel Service Inc. Class B
Good governance	58 companies with equally high board independence
	Nexi S.p.A.
Environmental good	80 companies with equal % revenues from environmental good
	994 companies with no revenues from environmental good
Social good	105 companies with equal % revenues from social good
	796 companies with no revenues from social good
Avoiding environmental harm	1093 companies with no revenues from environmental harm
	41 companies with equal % revenues from environmental harm
Avoiding social harm	1167 companies with no revenues from social harm
	24 companies with equal % revenues from social harm
Economic development	4 companies with equal exposure to high GDP economies
	8 companies with equally low activity in low GDP economies
Avoiding water scarcity	6 companies with equally low % of operations in water scarce geographies
	6 companies with equally high % of operations in water scarce geographies
Employment	6 companies with equally high exposure to high unemployment geographies
	NEXON Co. Ltd.
Tax gap	404 companies with no tax gap
	Wheaton Precious Metals Corp

# METHODOLOGY NOTE

## IMPACT NUMBER

Our measure of total impact is the risk of the active ESG shares needed to achieve the fund's SDG factor exposures. The total number is a net of positive and negative impacts, so our measure can be negative if the portfolio has more negative exposures than positive (think 'sin' fund). The impact number will always fall between the total tracking error figure and its negative. For example, if a portfolio has 100bps tracking error, its impact will fall between -100 and 100.

### Negative and positive impact numbers

The negative and positive impact numbers are shown separately for the set of factors above and below benchmark. Separating the positive and negative impact exposures can be useful, because sometimes funds with the same net impact arrive at a similar number with very different underlying exposures.

For example, Fund 1 with Positive Impact = 41bps, and Negative Impact = 39bps, and Fund 2 with Positive Impact = 6bps and Negative Impact = 4bps both arrive at the same net Total Impact of 2bps. But if you are concerned about avoiding negative sustainability impacts through your investments, you would see Fund 2 much more positively than Fund 1.

## IMPACT GRAPH

The impact graph shows the size of the portfolio's exposure to each impact indicator. It is a single visual designed to help the viewer quickly understand where a particular fund's strengths lie.

### How to read the impact graph

1. The symmetrical navy circle in the middle of the graph represents the benchmark.
2. The (usually more irregular) bright blue line shows the fund's factor exposures relative to its benchmark's exposures.

We use standard deviations of each indicator to unify the scale in the impact graph.

If the two lines were exactly the same, this would mean the portfolio is tracking the benchmark closely on every impact factor.

When parts of the blue line which represent the portfolio are outside the benchmark circle, that indicates a positive impact. The further they are outside the benchmark circle, the bigger the active exposure of the fund to that particular impact indicator.

When the blue line falls inside the benchmark circle, this indicates that it has negative active exposure to an impact indicator. For example, in the sample graph above, the sample portfolio allocated more capital to companies with highly paid male executives.

All the indicators used in the model are positive indicators, meaning that the fund line falling outside the benchmark circle is always a positive. By looking at the graph, we can quickly tell how the positive and negative areas either side of the benchmark circle compare to each other in terms of size (summarized in the single impact number), and also how the fund's impacts are distributed between the different indicators.

For example, if you were looking at a best in class governance quality fund, you would want to see the blue line outside the benchmark circle for *Board independence*, *Executive pay* and *Gender equality*, whereas someone looking for an environmentally focused fund would want to see strong exposures in carbon, waste, water, and water scarcity.

### Our benchmarks

The benchmarks used on the Investment Impact Model website are calculated in-house to represent 90% of the investable universe. We use regional classification and follow standard industry practice in their construction. Clients subscribed to the full version of the tool may provide their own benchmarks, both bespoke and industry standard.

## FUND IMPACT MEASURES

This section reports the raw data in terms of impact vs. the benchmark, indicator by indicator. For example, for *Executive pay* we will show the weighted average of the ratio of top management pay over average employee pay for the fund and the benchmark side by side. The standardized difference in these values is what is plotted on the impact graph.

### Estimated data

This is the percentage of positions by weight in the portfolio that did not report the data we use to calculate an indicator. We fill gaps in company reporting with proprietary estimation models

and run quality checks on reported data to identify outliers. In rare instances, the numbers reported by companies are completely implausible and we actually replace them with estimations, as these are more reliable. We disclose the percentage of reported data for transparency, and because it is a simple and commonly recognized metric to understand how much of the data comes directly from companies and how much relies on estimation.

## INVESTMENT EQUIVALENTS

This table translates the Fund Impact Measures from the previous section into the impacts per unit of investment (for instance a euro, a pound or a dollar), and maps each of them to the UN Sustainable Development Goals. The values in green are positive impacts, and those in red are negative.

For example, in real terms, what is the difference between investing in a fund with 8% tax gap vs. 12%? This section would translate this difference into 3 cents less tax paid by the listed companies held in this portfolio per 1 dollar invested, compared to investing in the benchmark portfolio. This number would show up in red because it's a negative impact, and in the last column in the table you will see that this impact relates to Sustainable Development Goals 1, 9, 10, and 16.

## IMPACT ATTRIBUTION ANALYSIS

This part of the report shows the drivers of the portfolio's impact both by indicator and at overall portfolio level. It is based on traditional financial performance attribution for a portfolio.

### Country, sector and company selection

We list what proportion of the impact in % is due to country selection, sector selection, and company selection.

This attribution helps further deepen the understanding of the impact profile of a portfolio and differentiate between similarly performing funds.

For example, a fund performing well on *Avoiding water scarcity* where 80% of this performance can be attributed to country selection is different than one with similar performance on this indicator driven 80% by company selection.

The first would hint that most of the impact may be achieved simply by investing more in markets where water scarcity is not an issue. The second would suggest that the same positive impact is more so the outcome of selecting companies which use water as a resource efficiently regardless of their geography of operation.

### Top and bottom contributors and performers

Under Fund Top and Bottom Contributor, we name the securities held in the fund alone which contribute most positively and most negatively to the portfolio level score on each factor (maximum and minimum of weight times exposure). Under Benchmark Top and Bottom Performer we name the securities from the fund and benchmark holdings combined that

have the highest and lowest factor exposures. For *Tax gap*, *Gender equality*, and business model based indicators, we report the number of positions which have no revenues from environmental and social good and harm, and those that have no diversity in top management or no tax gap. This offers some insight into the positions which drag down and those that boost the indicator and overall portfolio exposure on a particular issue.

## CONTACT US

If you have questions about the Investment Impact report, or you would like to discuss the model and its application with us further, we will be happy to hear from you at [info@impact-cubed.com](mailto:info@impact-cubed.com).

## ABOUT IMPACT CUBED

Impact Cubed measures Investment Impact in terms of sustainable development for any portfolio of listed securities.

Understanding, measuring and managing investment impact facilitates cheaper access to capital for more sustainable companies, and with that, encourages a flourishing planet.

Impact Cubed was originally used to measure investment impact in-house by Auriel Equity Investors LLP.

It is our hope that this service helps investors make informed decisions about the way they allocate capital, by shedding light on the varying levels and areas of impact delivered by different investment portfolios.
